Adarma Managed Security Services

Ever-changing threat landscape... evolving threats ... relentless adversaries... increasing risk.

You get the message. That's why you're looking for a partner who understands the dangers to help defend your business and manage that risk.

Adarma operate as a true, trusted security partner. That means we won't lock everything we do inside a black box - everything we do is fully visible. Totally transparent. Entirely accountable.

There's auditable, evidential, meaningful data for every single piece of information we generate. All our pricing is clear and upfront—there are no hidden costs. And all our solutions are tailored to you as an individual partner.

We don't just *ask* you to trust us with your defence — we demonstrate 24/7 why you should. We focus on outcomes, aligned to four defensive principles. By following these principles we become focused on the only thing that matters in security - **protecting your business mission.**

- Aware means understanding your business and the threats it faces to deliver services that fit your unique requirements.
- Aligned means defining and implementing a strong defensive baseline tailored to the risks faced by your business.
- Adaptive means operating active defenses that remain resilient when business needs change and the threat landscape alters.
- Assured means continuously monitoring and assuring the defensive capability to give comfort to your board that your business is prepared for these changes.

Adarma's Managed Services

All Adarma Managed Security Services are delivered from our 24/7 ISO 27001 accredited, Security Operations Centre (SOC). The service is cloud-based, underpinned by Splunk Cloud in a dedicated AWS instance. This gives High Availability Business Continuity options, EU or UK data centres, and guaranteed Service SLAs, all operated by Adarma analysts - cyber security professionals with combined decades of experience in SOC management and operations.

Via a combination of security orchestration and response (SOAR) capabilities and mature internal processes, we ensure an analyst's attention is never spread thin across clients and an analyst's time is focussed on the situations that matter- allowing us to build contextual awareness of your organisation, people, and processes.

We offer multiple engagement models:
- Fully outsourced
- Adarma personnel operating onsite
- Integrated hybrid (your team and Adarma become one)

(Advice and recommendations for selecting the right SOC model, based on our experience in assisting customers in the decision-making process, is available in our white paper, "Selecting The Right SOC Model" available here)

Our team can integrate with your environments or accelerate onboarding with a virtual or in-person workshop, making sure we understand everything we need to deliver the service you need.

We take a modular approach to services, offering options and capabilities from essential to advanced, working together to build the service that best suits you.

Adarma Managed Security Services

Managed Services Core Components

Our managed Security Operations Centre (SOC) service is a transparent, flexible, innovative offering that is built on decades of experience in design, building, and operating SOCs. It's the beating heart of our managed services, delivering award-winning Managed Detection and Response (MDR).

- **Accelerated onboarding and use case workshop** — customers are quickly onboarded, and a baseline set of use cases rapidly established.
- **Setup event acquisition** — we work together to establish the flow of events from the customer infrastructure into the event handling platform.
- **Incident support** — 24/7 monitoring and response to incoming events. Close alignment with customer teams ensures effective response and mitigation.
- **Platform support** — Adarma maintains the event management and workflow platform throughout the contract lifetime.
- **Proactive threat hunting and use case development** — new threats are translated into use cases to ensure monitoring remains relevant as the threat landscape changes, with use cases refined iteratively per customer.
- **Service management** — we provide tailored MI providing insight into the data — not just its status.
- **Per-customer service catalogues** ensure clearly defined operating procedures.

And our use of SOAR via Splunk Phantom means we're fast, efficient, and focussed where it matters to you:

- Incident correlation and triage
- IOC enrichment
- Rapid reporting
- Concise, useful case management

Additional Services

We offer a range of supporting services and capabilities to augment the managed SOC as necessary.

- **Endpoint Detection and Response (EDR)** services let us rapidly and accurately identify endpoint threats such as malware or lurking APTs — keeping you aware before harm is done.

- **Vulnerability Management (VM)** services let us identify, contextualise, track, and prioritise remediation recommendations to reduce risk in a managed and intelligence-driven way.

- **Threat intelligence (TI) services** keep you informed of threats to your security landscape as they emerge and trend - and our analysts alert to detect and alert you to them.

For more detail on all or any of these services, please visit the Adarma website.

Why Adarma?

- **Continual improvement of rules and rulesets** as new threats are identified generally and per customer.
- **Complete visibility** of incident handling workflow tools and the actions we take on your behalf.
- **Flexible engagement models and service levels** give you the service you want, not one we impose.
- **We partner with best of breed** solutions to deliver world class services, delivering rapid value through the service we implement and deliver.
- **Our innovative interrogation capability** lets us quickly manage and tune use cases, reducing your time to value.

Adarma Managed Security Services

And it's not just our technology:

- Our managed services are backed up by a wider practice of accredited experts across disciplines and technologies — all with strong security backgrounds.
- Our SOAR lead is the only accredited Phantom trainer in Europe.
- Our Managed Services Product Lead sits on the customer advisory board of a market-leading SIEM technology provider.

About Adarma

We're one of the largest independent security services companies in the UK. A business formed and run by experienced senior security leaders, we know security and how to deliver real value in the real world. This is why our clients are successful FTSE 350 organisations from all industry sectors.

Adarma delivers innovative tailored solutions for some of the world's biggest companies. Our teams are a diverse group of technical experts and consultants, all with the same objective and united by the same goal: to help our clients prepare for attack and stand side-by-side with them when it happens.

Helping make the world a safer place.
