ADARMA Public Cloud Assessment
Gain and retain control of your cloud

Understand, review, and take action to improve your cloud security posture

Questions to ask about cloud

Public cloud offers huge benefits to an organisation. Rapid deployment, flexibility, low up-front costs, and scalability help deliver a competitive edge. Achieving Faster time to market, increased customer satisfaction and reduced operating costs have made cloud computing virtually universal among organisations of all sizes, often as part of a hybrid/multi-cloud infrastructure architecture.

Public cloud also comes with risks and security holes. You may have valid concerns around the lack of visibility of data being placed in unauthorised environments and access control to unmanaged environments which may lead to theft of data. You may have questions unanswered including:

- Can we get visibility of what organisational assets are in the cloud and any shadow IaaS?
- How can we be sure who has access to what and their permissions and privileges?
- Do we have visibility of our control coverage and correct logging to protect and detect threats?
- Can we be sure we don't have misconfigurations or weak configuration?
- Can we apply consistent standards and controls across multiple cloud providers and our traditional on-premises environments?

Answer them with Adarma

The Adarma Public Cloud Assessment helps you answer these questions. We help you uncover any security and compliance issues that exist in your cloud or multi-cloud environments, we give you the detail on how to fix them and suggest actions for improvement.

Our team of experienced consultants probe deeply into public cloud environments and analyse the configuration of systems and services as well as the operational governance of the environment.

Using a combination of our cloud threat experience and technology we deliver to you a detailed visual representation of your standpoint and a comprehensive review of your security in the cloud; we support you to resolve issues quickly and ensure cloud is not your weak link in the face of cyber threat.

WE HELP YOU

Discover security misconfigurations, mistakes and gain governance insights into your cloud deployments.

Gain visibility over single or multi-cloud assets and any misconfiguration in a single assessment

Validate results against industry compliance standards or vendor best practices.

Design an improvement plan for ongoing security posture compliance and governance

ADARMA

Focused on your outcome

We don't just scan and tell you a list of issues.

- We visualise the issues and show you where they are.
- We detail the risk and criticality in relation to cyber threat risk.
- We provide you with actionable, step by step guidance to remediate.
- The Adarma team can even remediate the risk on your behalf.
- We deliver a roadmap for development to improve your public cloud security maturity.
- We outline an improvement project plan for continuous monitoring and assessment.

We are Adarma

Your strategic partner for effective cyber threat management, we exist to protect your promise of cyber threat resilience. Our expert team of threat management specialists guide and support you to confidently mitigate risk and maximise value of your cybersecurity. Working hand-in-hand with you and your team we provide advice, intelligence, technology and security services with complete visibility and transparency to ensure you are fully protected as you transform, innovate and grow. We help you deliver the security outcomes you need to make a difference.

How to Engage

For more details, discuss your needs with Adarma client Director or account manager today.

Multi-Cloud	Customised	Actionable
Most organisations have more than one cloud provider.
Our assessments provide common compliance rules covering complex multi-cloud environments.	Whether you need a review of your entire estate or a single security boundary in your cloud environment, our assessment can cater for your specific needs!	We provide you with actionable, step by step guidance to remediate any misconfigurations. Our consulting team can even remediate the risk on your behalf.
