ADARMA Security Maturity Assessment
Accelerate your security programme

Help to define, measure, and accelerate your security programme

Assessments answer questions

The cyber threat landscape and attackers TTP's (tools, tactics and procedures) are continuously evolving - nothing stays the same for long. Therefore, cybersecurity assessments are a crucial and routine component of any risk and security management program. Understanding your cyber hygiene, defensive controls, and your ability to detect and respond to the threats you face is essential, as is having the right roadmap to achieve the security you need.

A threat-led cybersecurity assessment is critical for determining whether or not your business is properly prepared to defend against a range of threats pertinent to your organisation, industry and geography. The goal is to identify and minimise gaps in security, demonstrate effectiveness or ROI and enable informed decisions on strategies and investments needed for day-to-day operations. You may have a range of questions to answer such as:

- What do I need to improve, how much will it cost, how do I justify budget requests, and can I accelerate my security programme?
- How do I demonstrate, with evidence relevant to the business, that security is improving, can I express this terms of business risk reduction, provide ROI and reassurance about the latest threats?
- How effective is any 3rd party security provider, are they implementing the right controls aligned to my threat and risk tolerance do we have the right and relevant defensive capability aligned to industry and geo threat?
- Is my security strategy still relevant or do I need a new one and corresponding roadmap?

Get answers that give confidence

The Adarma cyber security assessment can help you prioritise your budgets to focus on the areas that are most likely to be exploited by a threat actor. We do this by taking a threat led approach towards the analysis of your current cyber security baseline.

Our threat-led approach informs the most appropriate target state your organisation will need to achieve to enable you to defend against the threat actors that are likely to target your business, industry and geography.

WE HELP YOU

Demonstrate where investment is required and what needs to be done to increase maturity.

Leverage the threat landscape to evidence why investment is required and ensure relevancy to your organisation.

Not just a paper based exercise, technical assessment to ensure controls optimisation to minimise risk exposure.

Threat intelligence used to develop signatures to support your blue team / SOC with threat identifiers.

ADARMA

Start with threat, drive to your outcome

Everything we do is driven by the threats you face. Our team take a threat led approach towards the analysis of your current cyber security baseline, This allows a more accurate definition of your appropriate target state. This ensures that your organisation is able to achieve it and defend proactively against the threat actors that are likely to target your organisation.

Option 1
Threat landscape, detailed current state analysis, recommendations and roadmap to achieve target state.

Option 2
Option 1 plus controls optimisation analysis (penetration testing and vulnerability identification).

Option 3
Option 2 plus the inclusion of threat intelligence to support intelligence led triaging of remediation activity.

Option 4
Option 3 plus engineering support to remediate the gaps identified.

Our team will also help you every step of the way to achieve your outcomes.

We offer further controls testing and vulnerability analysis. We integrate intelligence to support necessary detection content and playbook development.

We help you integrate valuable context to improve triage and workflow performance

We offer further engineering support to ensure your controls are integrated, optimised and delivering the full vaule you need.

We are Adarma

Your strategic partner for effective cyber threat management, we exist to protect your promise of cyber threat resilience. Our expert team of threat management specialists guide and support you to confidently mitigate risk and maximise value of your cybersecurity. Working hand-in-hand with you and your team we provide advice, intelligence, technology and security services with complete visibility and transparency to ensure you are fully protected as you transform, innovate and grow. We help you deliver the security outcomes you need to make a difference.

How to Engage

For more details, discuss your needs with Adarma client Director or account manager today.

Threat-led	More than Tech	Actionable
Our threat intelligence driven assessment helps identification, prioritisation remediation of risk to minimise your organisations attack surface.	Based on your operation, structure, context, and risk profile our detailed roadmaps and resolution activity are relevant, immediately understood and easily costed	Our tailored approach ensures outputs are appropriate, actionable, and focused on your threat landscape and threat and corresponding risk you will be exposed to.
